Preface

The Scientific Directory and Annual Bibliography of the National Institutes of Health is intended for reference use by research workers in the biomedical sciences. It presents the broad outlines of NIH organizational structure, the professional staff, and their scientific and technical publications covering work done at NIH. The volume also includes comparable information on research conducted at NIH by the National Institute of Mental Health, a former component. The NIMH became a separate bureau of the Public Health Service on January 1, 1967 and is now a component of the Alcohol, Drug Abuse, and Mental Health Administration.

Material in the volume is arranged by components, with the directory and bibliography entries together at the laboratory or branch level within each component.

The directory includes the names of scientific staff members, other key individuals, and visiting scientists and guest workers with tenure of a year or more as of January 1, 1982. An asterisk (*) before a name identifies the chief of a section.
